

## ***“CAUSE UNKNOWN” THE EPIDEMIC OF SUDDEN DEATHS***

Rise in Non-Covid-19 Deaths Hits Life Insurers

**‘Huge, huge numbers:’ insurance group sees death rates up 40 percent over pre-pandemic levels**

Why Are All-Cause Excess Deaths in the Under-45s So Much Higher This Year Than at the Height of the Pandemic?”

A. Tucker Carlson interviewed Ed Dowd:

B. Ed Dowd's book (on cover) – quotes:

In the first week of January 2022 OneAmerica CEO Scott Davison made comments to a Commerce meeting that were soon picked up by some media outlets:

***“We are seeing, right now, the highest death rates we have seen in the history of this business – not just at OneAmerican. The data is consistent across every player in that business.”***

Davison said the increase in deaths represented “huge, huge numbers,” and that it wasn’t elderly people who were dying, but “primarily working-age people 18-64” who were employees of companies with group life insurance plans through OneAmerica.

“And what we saw just in third quarter, we’re seeing it continue into fourth quarter, is that death rates are up **40%** over what they were pre-pandemic,” he said.

**“Just to give you an idea of how bad that is, a three-sigma or a one-in-200-year catastrophe would be 10% increase over pre-pandemic,” he said. “So 40% is just unheard of.”**

He added that most of the claims for deaths being filed were not classified as COVID-19 deaths.

At the same time, the company was seeing an “uptick” in disability claims, at first short-term disability, and then a new increase in long-term disability claims (p. 66).

Ed Dowd in his introduction:

It isn’t COVID, of course, because we know that COVID is not a significant cause of death in young people...when lots of healthy teenagers and young adults die in their sleep without obvious reason, collapse and die on a family outing, or fall down dead while playing sports, that all by itself raises an immediate public health concern. Or at least it used to.

...what you’re about to see is not normal.

Or at least it wasn’t normal before 2021 (p. 3).

After a systematic review of the literature, the Lausanne Study determined there had been 1101 such cases – **over a period of 38 years**. That’s an average of about 29 per year. These days, we’d be grateful to see a single month with only 29 such events. In fact, since June 2021, there hasn’t been even one month with fewer than 29 of these sudden deaths; there were 90 reported in December 2021 alone, and about the same the month after that (p. 33).

*Low reporting rates preclude or slow the identification of problem drugs and vaccines that endanger public health. New surveillance methods for drug and vaccine adverse effects are needed...fewer than 1% of vaccine adverse events are reported (p. 53).*

On August 17, 2022 the Society of Actuaries Research Institute (SOA) published their Group Life COVID 19 Mortality Survey Report.

This report represents approximately 80% of the group life US revenues. In Table 5.7 of their report, you can see there was an event that occurred in the Third Quarter of 2021 (highlighted in red and orange) which confirmed excess mortality of 78% and 100% respectively, for two age groups (23-34 and 35-44). (p. 80).

## **APPENDIX TWO – FROM OLD TO YOUNG**

Again Table 5.7 of the August study shows that the 25-64 year age groups experienced elevated mortality for the first 5 quarters of the pandemic, but then something catastrophic hit that age group starting in Q3 2021...we can determine that the 25-64 age group of the group life population experienced 125% and 140% excess mortality in the last 9 months of 2020 and the full year 2021 respectively...as you already know we argued the only possible explanation was the timing of the mandates and the “vaccines.”

**The punchline is essentially that the group life population (which is much healthier than the general US population) in 2021 experienced a massive 8% higher mortality rate than the overall US population. What changed in 2021 to cause this normal relationship to flip suddenly?**

**The only thing that changed was a mandated vaccination campaign where continued employment was contingent upon compliance with no exceptions.**

The same thing holds true for my vaccine as the culprit for the increase in Sudden deaths and the All-Cause Mortality in 2021 and 2022 (pp. 185-186).

## **SEEING IS BELIEVING**

If these new Pharma products had been bound by the same laws as all other Pharma products, their TV commercials would have to end with the familiar announcer hurriedly rushing through side effects:

**COVID vaccines will leave some people more vulnerable to infection and sickness. Some people will experience side effects including cardiac arrest, blood clots, stroke, and sudden death.**

It wouldn't make for a very good sales pitch.

Of course, Pfizer and Moderna didn't need any sales pitch for these vaccines – since the products were developed, ordered, purchased, promoted, defended, indemnified and even mandated by our own government (p. 139).<sup>2</sup>
