

***Stratospheric Aerosol Injection and Geoengineering: Is our government trying to change our climate through artificial cloud cover?***

(Same verses – nothing has changed – except it is worse)

Gary Heartsill

August 18, 2019

Page 1 – Quotes from my Chemtrails Paper ([www.gheart.net](http://www.gheart.net) - in Magazine).

Page 2 – Back yard ‘wafting’ cloud.

Page 3 - My trash can - with rust...

Page 4 – Breathing the night air.

**“Enjoy the clear BLUE skies for as long as you can...”**

In 1996 “The third type of aerosol comes from human activities... The concentration of human-made sulfate aerosols in the atmosphere has grown rapidly... The sulfate aerosols absorb no sunlight but they reflect it, thereby reducing the amount of sunlight reaching the Earth's surface. Sulfate aerosols are believed to survive in the atmosphere for about 3-5 days” (NASA, Atmospheric Aerosols, p. 3).

The argument for the climate change, the global change, or actually global warming is the temperature of our earth could be lowered if sulphide oxide were placed in the atmosphere to then reflect the sun rays. This operation is done by Stratospheric Aerosol Injection.

Following the October ‘sighting’ of chemtrails I ran down a quote that convinced me the government is involved: “Another example is the array of technologies—often referred to collectively as **geoengineering**—that potentially could help reverse the warming effects of global climate change. One that has gained my personal attention is **stratospheric aerosol injection**, or SAI, **a method of seeding the stratosphere with particles** that can help reflect the sun’s heat, in much the same way that volcanic eruptions do.” [bold/highlight mine.] Posted: Jun 29, 2016 04:43 PM - CIA Director Brennan Speaks at the Council on Foreign Relations.

Retrieved from <https://www.cia.gov/news-information/speeches-testimony/2016-speeches-testimony/director-brennan-speaks-at-the-council-on-foreign-relations.html>

*“I would still have systemic heartburn if they were spraying Ozarka 100% Natural Spring Water! The government can’t take all these airplanes and spray chemicals 24/7 over our country for ANY reason – especially for one they have no intention of ever telling us what they are doing!”<sup>1</sup>*

---

<sup>1</sup> I still feel like Charlton Heston in *Soylent Green*...to see him shaking his arm telling us what it means. See Prime Video, from \$2.99 to rent...

More Brennan: “An SAI program could limit global temperature increases, reducing some risks associated with higher temperatures and providing the world economy additional time to transition from fossil fuels. The **process is also relatively inexpensive**—the National Research Council estimates that a fully deployed SAI program would cost **about \$10 billion yearly.**” (my highlight – and I have a hard copy.)

This Chemtrail picture from my collection: Just as the sun was coming up a couple of weeks ago while out in my back yard I noticed this Chemtrail. Just missed seeing him go over so this shows it ‘wahfting’ or ‘wafting’ to the east. You see a lot of these and no one complains...please note: **This is the ONLY cloud in the sky...some would add ‘this is a clue.’**

An educational quote from NASA<sup>2</sup> “Aerosols and Incoming Sunlight” “The Sun provides the energy that drives Earth’s climate, but not all of the energy that reaches the top of the atmosphere finds its way to the surface. That’s because aerosols—and clouds seeded by them—reflect about a quarter of the Sun’s energy back to space.”

So, using this quote<sup>3</sup> to key from: “Prevailing weather conditions can weaken or **improve air quality.** ... Fog and **rain** can clean the **air** effectively. At the same time however, chemicals and compounds that pollute the **air** can fall with **rain** to pollute soil and surface waters” and using some of the sulfate aerosols like: sulfur, strontium, barium, nano aluminum, cadmium, and nickel wonder what a ‘sprayed rain’ would do to my trash cans?

*“God given clouds – don’t have fallout.”*

Here is my trash can after the spring rains this year.

Looks like rust but it certainly is not. The can is aluminum...

The ‘tint,’ depending on how much Geoengineering has taken place, will actually wash off the ‘rust’ as shown today on the same can.

Have been watching the phenomena for about two years. The fall out even ‘tints’ my garage fan.

This 'tint' will also wash off after less toxic/acid rains.

Lastly,

So, another few comments on perceived issues of Brennan's **stratospheric aerosol injections** to "reverse the warming effects of global climate change."

Sure figured by now, our 45<sup>th</sup> president would have exposed these folks and written his Executive Order to shut them down..."We have to stop them!" (Soylent Green).

It would have been nice to hear from someone in the government about this 'cloud seeding activity' but 'this ain't gonna happen.'

Sometime after dark go outside with a flash light and shine the beam across your yard. Observe the particles floating in the air. This is really exciting with a cool light mist and a very gentle breeze. You will (might) wonder where all of the 'floating' stuff is coming from?

The abject existence and our helpless defense of this **deleterious alteration of the environment** causes me to profess I would rather be fighting the \*?/-^%~ Nazis in WWII – at least I could reach out and touch the enemy.
